

Maintenance made effortless

TestWise provides the ultimate in maintenance support with electronic test equipment for TrainWise products. The TestWise solution includes custom training aids to bring operators and maintenance staff up to speed on the use of TrainWise equipment quickly and safely.

Portable Test Units are laptop computers with custom software that connect to TrainWise equipment, making easy work of scheduled maintenance tasks and on-board diagnosis and repair.

Customized for your needs

TestWise Bench Test Units are custom-designed for complete evaluation and testing of specific TrainWise equipment in the workshop.

These turnkey units are contained in rugged, mobile equipment racks, accompanied by laptop computers with installed software, cables, extender cards, and optional scanner. They are intuitively designed for easy set up, so they are practically ready to use right out of the box.

Bench Test Units check a wide range of functions, including discrete, analog, or PWM inputs; control outputs; audio outputs; and RF radio links.

They can also be used as a diagnostic tool for equipment that has been removed from the vehicle.

Through fully-automated tests, TestWise Bench Test Units enable rapid evaluation of functional status, calibration, and fault localization for TrainWise equipment in the workshop. Detailed report analysis and guided troubleshooting using the Bench Test Unit and supplied extender cards support repair technicians in localizing faults within specific functional units.

FEATURES AT A GLANCE

- » Automatic tests for fault isolation with minimal operator intervention.
- » Intuitive design for easy set up and operation.
- » User selectable tests for extended troubleshooting, calibration and repair.
- » Common user interface for all Bench Test Units.
